

Web Development Internship Task

Hi Geeks !!

This task is to determine your understanding of [HTML](#), [CSS](#), [Javascript](#), and [JQuery](#) skills along with the [REACT](#) Library and UI component using react.

In case you need to brush up your skills, please use hyperlinks to brush up.

Task - Create a single page website with the help of [Zeplin](#) Design

Click on this [[link](#)] to know how easy Zeplin makes the whole development process.

In order to access the design file, login to Zeplin using the following login credentials.

Login link : <https://app.zeplin.io/login>

Username/Email: testmauka@gmail.com

Password: mauka@1234

Use library of your choice for react, we prefer :

- Material.io [[link](#)]
- Ant Design [[link](#)]

Any additional libraries can be used to add functionality but make sure the library is open source and has support in future.

All the necessary icons and logo are uploaded on Google Drive, please use the following link to access : [asset](#).

Step -1 Setup

We believe in an agile work process and collaborate with each other to be on the same page of the development process we use :

IDE: Microsoft Visual Code Studio [[Download Link](#)]

Version Control is done using GIT : [[Git Documentation Link](#)] on GitHub [[Link](#)] and Gitlab [[Link](#)]

Step -2 Coding Standard

There is a certain coding practice we promote to achieve clean and scalable code.

Find Our Coding Standards here [[Documentation Link](#)]

Note : Coding Standards are our utmost priority and our documentation will help you to understand more in-depth.

Step -3 Review Your Code

Be the star of your part !! Learn how to create branches of existing code repositories using GIT as mentioned above. Creating a merge request for your code.

How to submit your assignment

Create a Github repository of your code and share a link to your code on mail to these 3 email addresses in a single mail - shivam@pracify.com / amit@pracify.com / tarun@pracify.com
